Continuation of 5. Applicant asserts that Flores et al. (U.S. Patent 5,630,069) nor Business Editors (Business Editors, DeskTalk Announces Next Generation TREND ReportPacks Automating Web-Based Performance Reporting, Business Wire, 5 May 1998, p. 1 [PROQUEST]) teach or suggest "depicting a plurality of interlocking polygons illustrating interactions between the participants, the polygons being positioned relative to each other to define the participants for the interactions". As indicated in the Final Office action, the claims only describe a picture or graph with drill-down features for more detailed information. A polygon by definition is any plane shape with straight sides, such as a triangle, square, pentagon, hexagon, etc. A polygon, whatever shape it is, does not determine what the interactions are. In fact, as written, the interactions would not change if circles were used. Therefore, the shape is considered non-functional descriptive material. As such, the references teach the technical aspects of the applicant's claimed invention.
